Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 72-104 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant refers to the biocompatible polymer and anti-resorptive agent as examples of a "supplementary bioactive agent". First, it is unclear what these are "supplementary" to in function. Second, while applicant is his/her own lexicographer, the biocompatible polymer is not considered a bioactive agent in the chemical arts. Clarification and correction are requested.

US Patent 4,880,610 is noted for its inclusion of apatite containing calcium, carbonate and phosphate (see col. 3). No mention is made of amino acids. Modifying proteins are listed and could possibly encompass anti-resorptive agents, although only enhancement of resorption is specifically listed. No motivation is found for including amino acids in the apatite.

US Patents 5,227,147 and 7,507,286 are also cited as patents of interest in their disclosures of bone cement compositions.
